Bi-Frost BioLiTE is a terrific product and many midsize herds are already using it. What we are providing is the first complete support and application instructional program. What do you do when your cattle start to break down in the middle of the winter? Bi-Frost BioLiTE's Application Bulletin recommends that you thaw and re-freeze the product in the middle of December, when you have the earliest chance to raise them to a thermoneutral zone. What if you don't thaw and refreeze it? Well, there are other ways. Maybe you have a warm barn. If so, add Bi-Frost BioLiTE to the feed for an extra week before you go to bed
